INVOICE

Services	qty	amount
Heat Pump only Installation Package	1.0	\$0.00
Heat Pump Package Includes		
• Full system commissioning and performance testing • Room-by-room heat loss and heat gain analysis for proper system sizing • Custom-sized heat pump selected to match the home's needs • Outdoor temperature sensor for improved control and efficiency • Wi-Fi thermostat for convenient remote access • Installation performed by certified HVAC technicians • Heat pump mounting pad included with site preparation • Properly sized and insulated refrigerant line set • All required electrical connections for the heat pump • Removal and disposal of the existing boiler system • Removal and disposal of hot water baseboard heaters • Refrigerant charge balancing for maximum comfort and energy savings		
Warranty Coverage		
Heat Pump Warranty		
• 10-year compressor coverage • 10-year parts and coil coverage • 2-year labour coverage		

Services subtotal: \$0.00

Materials	qty	amount
Duct Work & Ventilation	1.0	\$15,275.00
Following TECA Quality First Duct Design standards, supply and install a complete fully electric heat pump system. Scope includes construction of a mechanical room, supply and return plenums, a five-inch media filter assembly, and all required materials and labour. All ductwork will be fully sealed and attic ducting will receive single-wrap insulation. The homeowner will provide and install additional insulation to bring attic ducts to R20 efficiency after our portion of the work is complete.		
Heat pump air handler location		
The air handler will be installed in the storage room against the shared wall with the dining room. This location allows short, efficient duct runs to both the crawlspace and the vertical chase leading to the attic.		
https://grovemechanical.ca/		

Main floor supply system (crawlspace distribution)
A main supply trunk will be routed down from the air handler into the crawlspace to serve the entire main floor. Branch supplies will be directed to the following areas:

- Living room: two floor registers positioned along exterior walls or under windows
- Dining room: one floor register centered on the exterior wall
- Kitchen: one supply located near the stove wall or window wall
- Laundry: one small supply serving the appliance area
- Foyer: one floor register placed near the staircase for improved air mixing
- Powder room: optional small supply as required

Main floor return air
Two low-wall mounted return air grilles will be installed to ensure proper airflow and circulation.

Upper floor supply system (attic distribution)
A vertical supply chase will be constructed inside an upper-floor bedroom closet, extending into the attic. From this chase, a main attic trunk will distribute conditioned air to the upper floor through ceiling outlets. Supply locations are as follows:

- Primary bedroom: two ceiling supplies spaced for even coverage
- Bedroom 1: one centrally located ceiling supply
- Bedroom 2: one ceiling supply
- Bedroom 3: one ceiling supply
- Bathrooms 1 and 2: one ceiling supply each

Upper floor return air
A single large centrally located ceiling return will be installed in the upper hallway to maintain proper airflow and reduce noise transfer into bedrooms.

Electrical - OVERHEAD, TYPICAL SERVICE UPGRADE 200amps 1.0 \$3,690.00

Upgrade your home's electrical capacity from 100-amp to a 200-amp service upgrade. This ensures your system can handle modern energy demands safely and efficiently. Prevent overloads, enhance performance, and meet code compliance. Essential for safety, reliability, and future expansion!

BC Hydro - Residential Overhead - 200 Amp Upgrade Includes:

- Installation of:
- New 200 Amp 120/240V Siemens panel with 200 Amp main breaker.
 - New 200Amp Cable Feed
 - New Ground Plate and Wiring
 - New Branch Breakers
 - New Insulated Neutral Meter Base
 - Overhead Mask Kit

Miscellaneous materials Notes: BC Hydro's connection fee is not included and will be billed directly to the homeowner.

This service upgrade includes all labour and requires one full day for prep and another day for the upgrade.
Electrical Permit: EL-2006966-2025
CleanBC Better Homes Portion is \$1,500

Mitsubishi PVA-A30AA7 PUZ-HA30NKA1 1.0 \$14,950.00

PVA-A30AA7
PUZ-HA30NKA1
PAR-42MAACAB Thermostat

PVA-A30AA7
This is an indoor air handler (ducted unit) from Mitsubishi's P-Series. It's designed for concealed installation with ductwork. The "30" indicates a nominal capacity of around 30,000 BTU (2.5 tons). It provides heating and cooling when paired with a compatible outdoor unit and is commonly used in residential or light commercial applications where you want a central ducted system.

PUZ-HA30NKA1
This is the matching outdoor heat pump unit. It's also a 30,000 BTU (2.5 ton) system. It supplies both heating and cooling and is part of Mitsubishi's P-Series heat pump lineup. It's designed to work specifically with indoor units like the PVA air handler.
